

### 2 DRUM SPILL PALLET MODEL NO-DSP2

SIZE : 300\*1300\*690 mm  
 SUMP : 120L/32us gal  
 STATIC LOAD : 1200kg  
 DYNAMIC LOAD : 600kg  
 SUITABLE FOR HYDRAULIC TRUCKS,  
 FORKLIFT

Patron Safety -Drum Spill pallet, also known as a containment pallet or spill containment pallet, is a specially designed platform used to contain and prevent the spread of spills, leaks, or drips from drums, containers, or other stored liquids. These spill containment pallets are commonly employed in industrial settings, warehouses, and facilities where hazardous chemicals, oils, or other liquids are stored.

Model	Product Description	Approval	Product Dimension (H*W*D/mm)	Packing Dimension (H*W*D/mm)	Sump (L/us gal)	Static Load (kgs)	Dynamic Load (kgs)	Volume (m <sup>3</sup> )	G.W. (kgs)
DSP2	2 Drums Spill Pallet	CE	300*1300*690	300*1300*690	120L/32us gal	1200	600	0.27m <sup>3</sup>	17

#### Product Features

1. Patron Safety pallet is formed once and has a long life.
2. It could be freely matched with other types of pallets, combined into a leak-proof platform, and the operation is more flexible.
3. This product could be moved by forklift or hydraulic truck.
4. Different holding leakage volumes could meet various actual operation requirements.
5. The grid plate is stable and durable, and can be quickly separated and used.
6. It could reasonable use of space, stacking could reduce the floor area, and the operation is flexible and easy
